

GUIDE v.39.0 0.250-SE piecewise polynomial least-squares regression tree of degree 2 (constant fitted to incomplete cases) for predicting y_9 . At each split, an observation goes to the left branch if and only if the condition is satisfied. Sample size (in *italics*), mean of y_9 , and name of regressor variable printed below nodes. Terminal nodes with means above and below value of 0.099 at root node are colored yellow and purple respectively. Second best split variable at root node is y_1 .
