GUIDE v.39.0 piecewise stepwise linear least-squares regression tree (missing regressor values imputed) for predicting y. Largest pruned tree with no more than 7 terminal nodes. At each split, an observation goes to the left branch if and only if the condition is satisfied. V1 = Insulin__normal_(human)__minimum. V2 = Insulin__normal_(human)__minimum. V3 = gewicht__sum_values. Circles with dashed lines are nodes with no significant split variables. Sample size (in *italics*) and mean of y printed below nodes. Terminal nodes with means above and below value of 177.5 at root node are colored yellow and purple respectively. Second best split variable at root node is Insulin-Isophan_(human)__mean.
